Project Overview:

Our group envisions a web-based application allowing students to view and access all offered tools for students to succeed throughout their college journey. Academic resources include faculty office hours, scheduling academic advising appointments, reserving library books, and accessing specialized equipment. In addition to these main services, students will also be provided access to student support services, including medical and counseling appointments, and opportunities to participate in career-related events, information sessions on internships, and study abroad programs.

While many current colleges offer similar services, the current process of accessing and booking for these resources is often fragmented, inefficient, and confusing. Students are required to rely on emails, in-person coordination, and confusing steps in accessing these free resources. This program will help all students and staff/faculty book a time to meet within one application on future classes, provide resources for students struggling, and opportunities to find their next steps outside of college. As a whole, this system will help students, staff, and faculty efficiently schedule appointments in real-time, provide easy-to-access resources for academics, research, and career events beyond the classroom.

Users Roles:

- Admin (Manages Overall System): Responsible for managing the overall application. Specifically, creating/managing accounts, adding/removing any campus resources/equipment, and handling any errors/system-level configurations.
- Students: Consists of the majority population of users having the ability to register/log in to the system, browse/select campus resources/services, view advisors/counselors availability in real-time, book/reschedule/cancel appointments, and receive any important reminders.
- Staff/Faculty: Have similar features to students, including logging in, managing their availability, approving/rescheduling/rejecting appointments, viewing upcoming appointments, and marking appointments completed/canceled.

Website Pages:

The number of Pages will vary between 10-12 pages

- Home Page
- User Login Page
- User Registration Board
- Student Dashboard
- Staff/Faculty Dashboard
- Admin Dashboard
- Resources Page
- Booking Appointment Page
- Managing Availability Page (Staff)
- User Management Page (Admin)
- Resource Management Page (Admin)
- Notifications/Reminders Page
- About/Help Page

USP (Unique Selling Proposition):

This system supports multiple resource types, including rooms, equipment, services, and faculty appointments, all within one platform. Additional features include two-factor authentication, an academic calendar, and access to internship and career opportunities, enhancing the system's security and organizing for a user-friendly experience.
